Objective

I am an enthusiastic software developer with a strong passion for JavaScript development. Proficient in full-stack web development, I consistently deliver high-quality applications. I am actively seeking a challenging role where I can leverage and expand my expertise in a dynamic and innovative environment.

Work Experience

Company: Amodcs Development Ltd   **July 2022 - Present**

- Spearheaded the development and deployment of new features from scratch using REACT, demonstrating exceptional ownership and initiative.
- Implemented REDUX to establish a centralized store, significantly enhancing efficiency and elevating code quality.
- Designed and delivered intuitive CORE-UI Components, streamlining development processes and ensuring timely task completion for the team.
- Conducted comprehensive test cases utilizing JEST and React Testing Library, resulting in the delivery of high-quality, bug-free code.
- Automated various workflows using CYPRESS, facilitating seamless End-to-End testing and improving overall project robustness.

Technology and Skills

- **Languages:** JavaScript, Java, C/C++
- **Frontend:** React, HTML/CSS
- **State Management:** Redux, Redux Toolkit
- **Backend:** Node.js, Express, Nest

Projects

Sunshine - Weather App   GitHub Project

- **Technologies Used:** React, JavaScript, API, Axios, Geolocation API, Context API
- **Description:** Sunshine is a weather application designed to fetch weather details in JSON format using Rapid API. It employs interactive CSS to display the data, offering users current location retrieval and city name search functionality for a 5-day weather forecast.
